KOSHAL VASANT BONDE

Passionate AI & Data Science undergraduate with a strong foundation in Data Structures, Algorithms, and Full-Stack Development. Skilled in Django, Django REST Framework, C++, and REST APIs, with hands-on experience building scalable web applications. Eager to contribute to innovative software solutions while continuously learning modern technologies and industry best practices.

PROJECTS

Geotracking APP

Engineered a feature-rich GeoTracker Android application for real-time IP-based location tracking and analysis. Utilized ipstack API and Leaflet to deliver accurate geolocation insights with interactive map previews. Enhanced user experience with a structured dashboard, history tracking, and integrated network utility tools.

RefineAI

An autonomous feedback-driven pipeline is a self-improving AI workflow that employs multiple agents or evaluation mechanisms to assess generated outputs against predefined quality metrics. Based on the feedback received, the system iteratively revises and optimizes the content, repeating the generation-evaluation-refinement cycle until the output achieves the required standards for correctness and coherence.

TRINERA

An intelligent farming assistant that combines computer vision, conversational AI, and real-time communication to help farmers identify and manage agricultural pests.
